Editor's Message

Thank you to all the authors that have been sending in their articles for consideration for publication in the *Environmental Health Review*. As well, a special thank you to those who act as reviewers as we cannot continue to publish interesting, well-researched articles without their help. It is very interesting to see the breadth and depth of subjects covered, which reflects the scope of environmental public health practice in Canada today.

The main purpose of this journal is to inform certified public health inspectors across Canada of important issues. In this Issue, we have one paper assessing our knowledge translation activities regarding an emerging public health threat—ticks. The other paper takes a different approach to our profession—one of protecting us against hazards we may encounter in the workplace. And by workplace, I do not mean our offices, but where most of our work is done, the field.

I receive monthly reports from our publisher giving me frequency counts of the number of times articles have been accessed as well as the most frequently accessed articles. It is encouraging to see our articles accessed as frequently as they are. Our readers are finding the articles helpful in their daily duties or interesting as they learn about issues in environmental public health.

We have many articles that are currently undergoing peer review, and we expect some of them to be ready for the next Issue. We are continuing to seek high-quality articles for publication, so please keep them coming. We always appreciate your submissions.
